

Interoperability

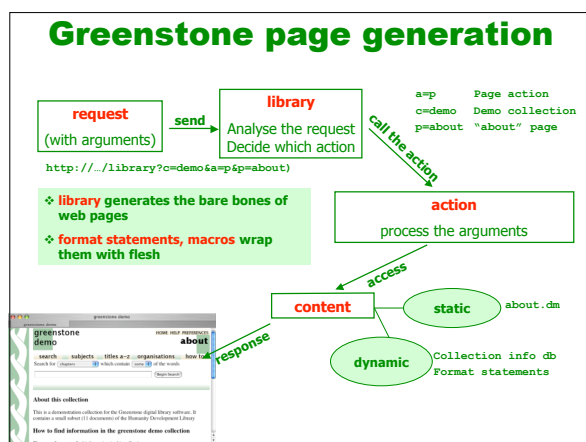

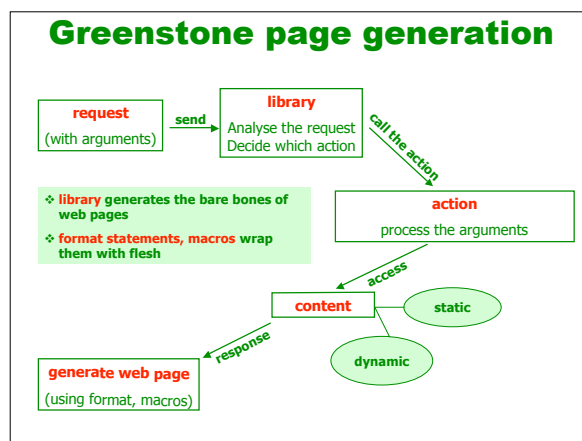

Course material prepared by
Greenstone Digital Library Project
University of Waikato, New Zealand

Agenda

- ❖ Interface customization
- ❖ Customizing parts of a page
- ❖ Greenstone in your organization
- ❖ Installing the web library (demo)
- ❖ Administration pages
- ❖ User management
- ❖ Restricting access to documents
- ❖ Building a collection
- ❖ The dreaded black screen
- ❖ More on building
- ❖ Multilingual support
- ❖ Language interfaces

Interface customisation

- ❖ Customising the Greenstone pages requires some knowledge of HTML
 - Can't use an HTML editor because the pages aren't static: they are generated "on-the-fly"
- ❖ Customising the Greenstone pages involves:
 - Macro files
 - ❖ In the Greenstone "macros" folder
 - Images
 - ❖ In the Greenstone "images" folder
 - Format statements
 - ❖ GLI: "Format Features" part of the Design pane

Macros

- ❖ Macros
 - Let you customize presentation without editing code
 - Are resolved at run-time:
 - ❖ Allows pages to be presented in different languages
 - ❖ Allows variables to be printed into the page text (e.g. number of search hits)
- ❖ Macro files
 - Stored in the Greenstone macros folder, named *.dm
 - ❖ home.dm for the home page, query.dm for search page etc.
 - Each file defines one or more "packages"
 - ❖ A "package" is a group of macros
 - Loaded on startup (= every request, for Web Library)
 - Listed in the main.cfg file in Greenstone's "etc" folder

What do macros look like?

- ❖ Names begin and end with underscores (like `_this_`)
- ❖ Content is defined using curly brackets
 - `_macroname_ [Arguments] { Macro content }`
 - Can contain plain text, HTML, and other macro names
 - Can contain conditional statements
 - ❖ `_if_ ...`
 - Can take arguments to restrict when they apply
 - ❖ `! = fr, c = demo` etc.

Interface Language Macrofiles

english.dm

```
#-----
# text macros
#-----

_textimageabout_ (About page)
_textimagehelp_ (Help page)
_textimagepref_ (Preferences page)
_textimagegreenstone_ (Greenstone Digital Library Software)

_textimagesearch_ (Search for specific terms)
_textimagecreator_ (Browse alphabetical list of authors)
_textimagetitle_ (Browse alphabetical list of titles)
_textmatches_ (Matches)
_textbeginsearch_ (Begin Search)

_texticonsmalltext_ (View this section of the text)
_texticondetach_ (Open this page in a new window)
_texticonexpandtoc_ (Expand table of contents)
_texticonexpandtext_ (Display all text)
_texticonhighlight_ (Highlight search terms)

_textlanguage_ (Interface language: )
_textsimplemode_ (simple query mode)
_textadvancedmode_ (advanced query mode (allows boolean searching u
```

Interface Language Macrofiles

chinese.dm

```
#-----
# text macros
#-----

_textimageabout_ [! = zh] (主页)
_textimagehelp_ [! = zh] (帮助页)
_textimagepref_ [! = zh] (选项页)
_textimagegreenstone_ [! = zh] (绿石数字图书馆软件)

_textimagesearch_ [! = zh] (特定范围检索)
_textimagecreator_ [! = zh] (按作者名字的列位字母顺序浏览)
_textimagetitle_ [! = zh] (按题名名字的列位字母顺序浏览)
_textmatches_ [! = zh] (匹配)
_textbeginsearch_ [! = zh] (开始查询)

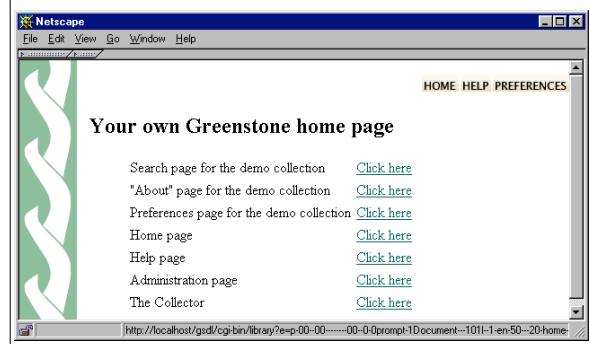

_texticonsmalltext_ [! = zh] (浏览该部分文本)
_texticondetach_ [! = zh] (打开一个新的窗口显示本页)
_texticonexpandtoc_ [! = zh] (扩展目录表)
_texticonexpandtext_ [! = zh] (显示所有文本)
_texticonhighlight_ [! = zh] (查询项以粗体显示)

_textlanguage_ [! = zh] (界面语言: )
_textsimplemode_ [! = zh] (简单查询方式)
_textadvancedmode_ [! = zh] (高级查询方式(可以使用 !, &, | 和括号来布尔查询))
```

Customising the home page

C:\Program Files\Greenstone\etc\main.cfg

change *home.dm* to *yourhome.dm*

package home
content {

yourhome.dm

```
<h2>Your own Greenstone home page</h2>
<ul>
<tr valign=top><td>Search page for the demo collection<br></td>
<td><a href="httpquery_&c=demo">Click here</a></td></tr>
<tr><td>"About" page for the demo collection</td>
<td><a href="httppageabout_&c=demo">Click here</a></td></tr>
<tr><td>Preferences page for the demo collection</td>
<td><a href="httppagepref_&c=demo">Click here</a></td></tr>
<tr><td>Home page</td>
<td><a href="httppagehome_">Click here</a></td></tr>
<tr><td>Help page</td>
<td><a href="httppagehelp_">Click here</a></td></tr>
<tr><td>Administration page</td>
<td><a href="httppagestatus_">Click here</a></td></tr>
<tr><td>The Collector</td>
<td><a href="httppagecollector_">Click here</a></td></tr>
</table>
</ul>
}
```

Macros used in home.dm

<code>_httppagehome_</code>	Address of the home page
<code>_httppagehelp_</code>	... the help page
<code>_httppagestatus_</code>	... the administration page
<code>_httppagecollector_</code>	... the Collector page
<code>_httpquery_&c=demo</code>	... the search page for the demo collection
<code>_httppageabout_&c=demo</code>	... the about page for the demo collection
<code>_httppagepref_&c=demo</code>	... the preferences page for the demo collection
<code>_content_{ ... }</code>	defines a macro called <code>_content_</code> contains HTML, but <code>'{', '}', '\,</code> and <code>'_'</code> must be escaped with a backslash
<code>_header_{ ... }</code>	HTML page header (contains background)
<code>_footer_{ ... }</code>	HTML page footer

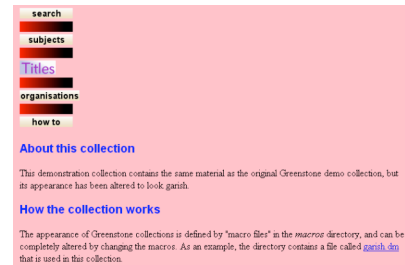

Collection-specific macros

- ❖ Macro files usually affect all collections
- ❖ To change the interface for one collection only:
 - Create a new macro file called extra.dm in the collection's "macros" folder
 - ❖ Create this folder if it doesn't exist
 - Add collection specific macros to this file
 - ❖ **Package** line in the beginning is mandatory
 - ❖ Specify the collection name as an argument to the macro:

```
_content_ [c=collectionname] { }
```

Garish collection

- ❖ A very ugly version of the demo collection!
- ❖ Uses collection-specific macros and CSS files

Garish: package "Global"

```
#####
package Global
#####
_starthighlight_ {<b>}
_endhighlight_   {</b>}
_navbarspacer_
{
  <br/>
  
  <br/>
}
```

Highlight query terms in bold
Separates search and classifier buttons

Garish: package "Style"

```
#####
package Style
#####
_htmlhead_ [c=garish] {<html>
<head>
  <title>_pagetitle_</title>
  <link rel="stylesheet"
        href="_httpimg_/garish/style.css"
        type="text/css"/>
</head>
<body>
}
_pagebanner_ [c=garish] { }
```

Page header macro
This overrides it to make all pages use the style sheet

Pagebanner normally includes the collection's logo, home/help/preferences buttons, and the image at top left that identifies the page. This overrides it to suppress these images

Garish: package "Style"

```
#####
package Style
#####
_collectionspecificstyle_ {
<link rel="stylesheet"
      href="_httpimages_/style.css"
      type="text/css"
      title="Greenstone Style"
      charset="UTF-8">
<style>
  body.bgimage \{ background-image: none; \}
  span.navlink:hover \{ background-image:
    url("_httpimages_/bg_blue.gif"); \}
</style>
}
```

This uses a collection-specific style sheet

```
_pagebanner_ {
<div class="pageinfo">
<p class="bannerlinks">_homelink_</p>
</div>
}
```

Pagebanner normally includes the collection's logo, home/help/preferences buttons, and the image at top left that identifies the page. This overrides it to suppress all these and just leave in the home button

Interface customisation: images

- ❖ The look of the collection can be changed very easily by editing the Greenstone images
 - Right-click on an image in the web browser to find its name
 - Open in an image editor and edit to suit your collection

Bluestone?

Agenda

- ❖ Interface customization
- ❖ Customizing parts of a page
- ❖ Greenstone in your organization
- ❖ Installing the web library (demo)
- ❖ Administration pages
- ❖ User management
- ❖ Restricting access to documents
- ❖ Building a collection
- ❖ The dreaded black screen
- ❖ More on building
- ❖ Multilingual support
- ❖ Language interfaces

Customizing parts of a page

- 1 In the General part of GLI's Design pane, Browse for the "about page" icon and select your image

Customizing parts of a page

- 2 Macro called `_globallinks_` in package `global` in the `nav_css.dm` file
- ```

javalinks(_homelink_ _helpink_ _preflink_)

```
- Position of the buttons is in macro `_pagebanner_` in the `style.dm` file. You can change the position of the buttons, add new ones, delete some, or display none at all

## Customizing parts of a page

- 3 Macro called `_imagethispage_`, e.g. in package `help`
- ```

_package help
_imagethispage_( _textHelp_ )

```
- the icon is language-specific, so it's in `english.dm`
- ```

textHelp(help)

```
- Labels like `subjects` are metadata-dependent, and defined in `english.dm` like this:
- ```

_labelSubject_( subjects )

```

Customizing parts of a page

- 4 Button names are determined by the classifiers, e.g. in `collect.cfg`
- ```

classify AZList -metadata Title button is named titles a-z
classify AZList -metadata Title -buttonname XXX button is named XXX

```

## Customizing parts of a page

- 5 The classifier list display is defined by a format string in the Format Features part of GLI's Design pane

## Documentation and Help

- ❖ *Developer's Guide* (developer.pdf)
- ❖ Customizing the Greenstone user interface  
(<http://www.wrlc.org/dcpc/UserInterface/interface.htm>)
- ❖ Documented example collections:
  - Garish collection
  - Authentication and formatting demo

## Help!

Email us:

[greenstone@cs.waikato.ac.nz](mailto:greenstone@cs.waikato.ac.nz)

Join the mailing list:

<https://list.scms.waikato.ac.nz/mailman/listinfo/greenstone-users>

## Agenda

- ❖ Interface customization
- ❖ Customizing parts of a page
- ❖ Greenstone in your organization
- ❖ Installing the web library (demo)
- ❖ Administration pages
- ❖ User management
- ❖ Restricting access to documents
- ❖ Building a collection
- ❖ The dreaded black screen
- ❖ More on building
- ❖ Multilingual support
- ❖ Language interfaces

## Greenstone in your organization

- ❖ Who needs to access your Greenstone collections?
  - Just you: use the Local Library version
- Other people in your organization, over your network: use the Web Library version
  - ❖ Possible to use Local Library, but not recommended
- People outside your organization, using the internet: use the Web Library version
  - ❖ If your organization has a website already, you'll need to get your ISP to install Greenstone on their servers
  - ❖ If your organization doesn't have a website already, you'll need to contract an ISP to install Greenstone and host your collections for you

## Local library vs Web library

- ❖ **Local library: stand-alone**
    - Serves collections on a standalone PC ...
    - ...and on others on the same network
    - Includes built-in Web server
  - ❖ **Web library: uses external web server**
    - Apache, Microsoft PWS/IIS
- 
- ❖ **Windows: Both local library and web library**
    - All versions: (3.1, 3.11), 95, 98, NT, 2000, ME, XP
    - Binaries supplied
    - Normally use local library (else must set up server)
    - Web library works with Microsoft PWS, IIS
  - ❖ **Unix, Mac OS X: Web library only**
    - Use Apache (or other web server)
    - Linux binaries supplied
    - Tested on SUN Solaris, Mac OS X
    - Need GDBM (standard on Linux)

## Agenda

- ❖ Interface customization
- ❖ Customizing parts of a page
- ❖ Greenstone in your organization
- ❖ Installing the web library (demo)
- ❖ Administration pages
- ❖ User management
- ❖ Restricting access to documents
- ❖ Building a collection
- ❖ The dreaded black screen
- ❖ More on building
- ❖ Multilingual support
- ❖ Language interfaces

# Web Library: Installation demo

# Configuring Apache

❖Download Apache from [httpd.apache.org](http://httpd.apache.org)

❖Install, then add to the Apache httpd.conf file:

```
ScriptAlias /gsdl/cgi-bin "C:/Program Files/Greenstone/cgi-bin"
<Directory "C:/Program Files/Greenstone/cgi-bin">
 Options None
 AllowOverride None
</Directory>

Alias /gsdl "C:/Program Files/Greenstone"
<Directory "C:/Program Files/Greenstone">
 Options Indexes MultiViews FollowSymLinks
 AllowOverride None
 Order allow,deny
 Allow from all
</Directory>
```

❖Access Greenstone at:  
<http://<host-name>/gsdl/cgi-bin/library.exe>

# Configuring PWS/IIS

1. Select *Advanced* to get the *Advanced Options* screen.

2. Select *Home* and click *Add*. Fill out the fields as follows:

Directory field:

C:\Program Files\gsdl

Alias field:

gsdl

Access permissions:

Read

Application permissions:

None

Click *OK*

This makes Greenstone files accessible to the webserver.

3. Back in *Advanced Options*, select *gsdl* and click *Add*. Fill out the fields as follows:

Directory field:

C:\Program Files\gsdl\cgi-bin

Alias field:

cgi-bin

Access permissions:

None

Application permissions:

Execute

Click *OK*

This allows the Greenstone program *library.exe* to be executed by the webserver.

4. Go to the URL <http://localhost/cgi-bin/library.exe>.

Note: you need to specify the *.exe* file extension with PWS and IIS.

# Web Library Troubleshooting

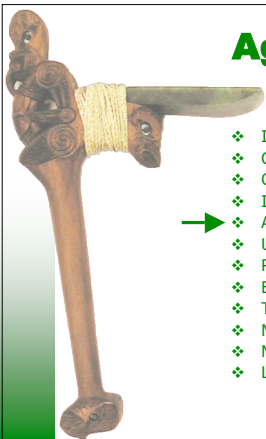

| Problem                                                                              | Try this                                                                                                                                                                                       |
|--------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| When I start Apache, it quits immediately.                                           | Add a <i>ServerName localhost</i> directive to the Apache configuration file (see Section 4.1 of the Greenstone Installer's Guide).                                                            |
| When I point my browser at the digital library, it displays garbage – a binary file. | Check the <i>ScriptAlias</i> directive in the Apache configuration file, making sure it comes before the <i>Alias</i> directive (see Section 4.2 and 4.3 of the Greenstone Installer's Guide). |
| I get the Greenstone home page, but the Demo collection icon does not appear.        | Run the program <i>library</i> (in the Greenstone <i>cgi-bin</i> directory) from the DOS prompt (or shell) to generate debugging information that will help you locate the problem.            |

# Documentation and Help

❖ *Installer's Guide* (install.pdf)  
Versions of Greenstone, installation procedure, Greenstone collections, setting up the web server, configuring your site, personalizing your installation

❖ **FAQ:** sections on

- Obtaining Greenstone
- Installing Greenstone
- Running Greenstone

# Agenda

❖ Interface customization

❖ Customizing parts of a page

❖ Greenstone in your organization

❖ Installing the web library (demo)

❖ Administration pages

❖ User management

❖ Restricting access to documents

❖ Building a collection

❖ The dreaded black screen

❖ Language interfaces

2007

## Administration Pages

- ❖ Access the administration pages by clicking on the button on the Greenstone home page

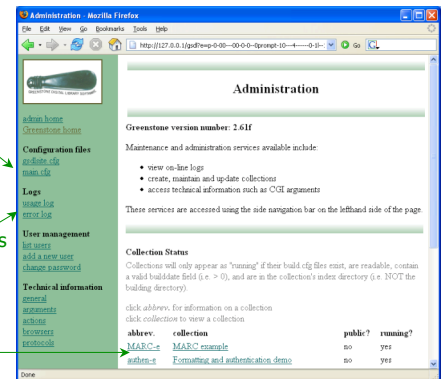

- ❖ Default admin user password: "admin"

## Administration Pages

Edit  
main.cfg file

View usage  
and error logs

List of  
collections

## Agenda

- ❖ Interface customization
- ❖ Customizing parts of a page
- ❖ Greenstone in your organization
- ❖ Installing the web library (demo)
- ❖ Administration pages
- ❖ User management
- ❖ Restricting access to documents
- ❖ Building a collection
- ❖ The dreaded black screen
- ❖ More on building
- ❖ Multilingual support
- ❖ Language interfaces

## User Management

- ❖ Users are added/edited/removed using the links on the Administration page

Show users, with  
links to edit or  
remove them  
(admin only)

User management  
[list users](#)  
[add a new user](#)  
[change password](#)

Add a new user to  
the system (admin  
only)

Change password (any  
user with an account)

## User Management

- ❖ User details:
  - Username
  - Password
  - Groups (controls what the user can do)
  - Comment

### Add a new user

username  (Usernames must be between 2 and 30 characters long. They can contain alphanumeric characters, '-', and '\_')

password  (Passwords must be between 3 and 8 characters long. They can contain any normal printable ASCII characters)

account status ☐ enabled ☐ disabled

groups  (Groups is a comma separated list, do not put spaces after the commas)

comment

## Agenda

- ❖ Interface customization
- ❖ Customizing parts of a page
- ❖ Greenstone in your organization
- ❖ Installing the web library (demo)
- ❖ Administration pages
- ❖ User management
- ❖ Restricting access to documents
- ❖ Building a collection
- ❖ The dreaded black screen
- ❖ More on building
- ❖ Multilingual support
- ❖ Language interfaces

## Restricting Access to Documents

- ❖ Restrict users to view certain documents
- ❖ Define groups and users in admin pages
- ❖ Restrict levels
  - collection (default) => the full collection
  - document => individual documents

## Restricting Access to Documents

- ❖ How to:
  - Set up in collection configuration file (collect\_name/etc/collect.cfg)
  - *authenticate* directive
  - *auth\_groups* directive
  - Restrict documents
    - ❖ Public\_documents
    - ❖ Private\_documents
  - Use document identifiers
    - ❖ Look at URL => d argument

## Restrict Collection

```
collect - WordPad
File Edit View Insert Format Help
classifiy Allist -metadata Title
classifiy Allist -metadata Source

format Datalist "<cd>[link][icon][link]</cd>
<cd>[highlight][Or][dis.Title],[ex.Title],[ex.Title],Untitled][highlight]</cd>
<cd>[ex.Date]</cd>"

format HList "[link][highlight][ex.Title][highlight][link]"

format VList "<cd valigtop>[link][icon][link]</cd>

Agenda

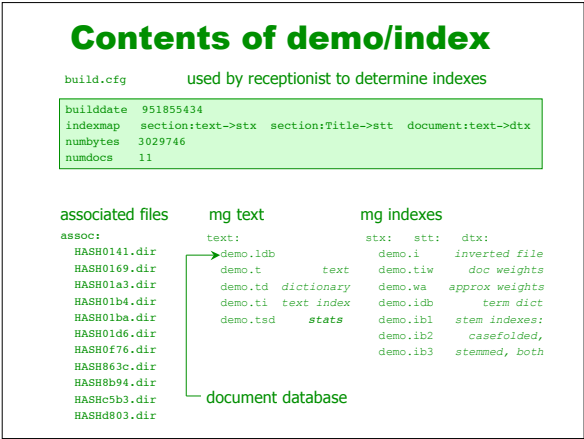

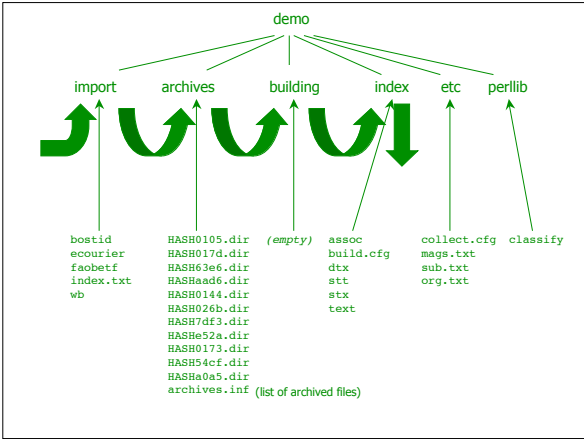

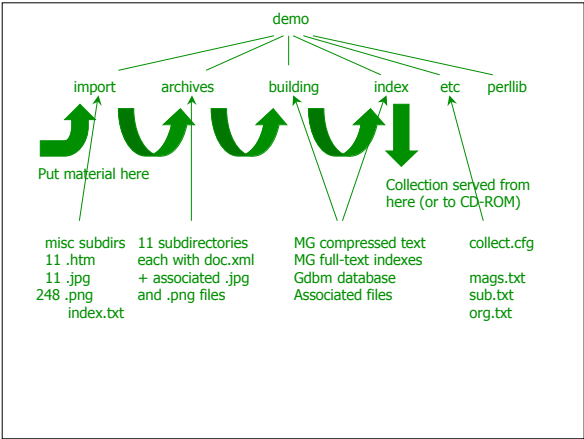

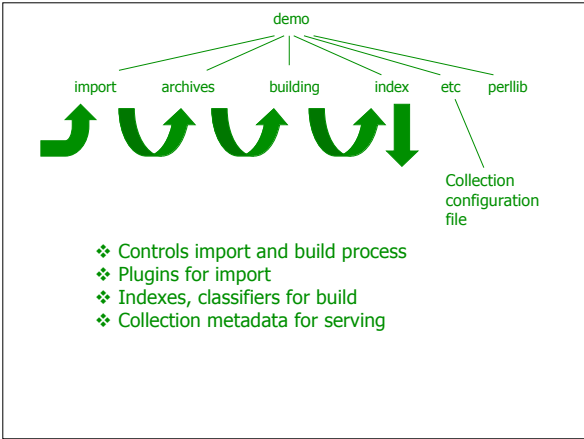

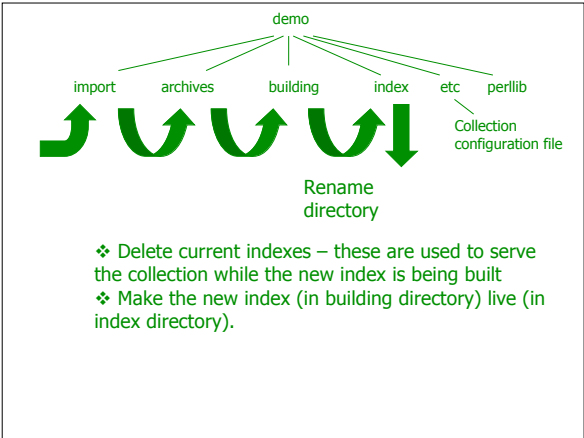

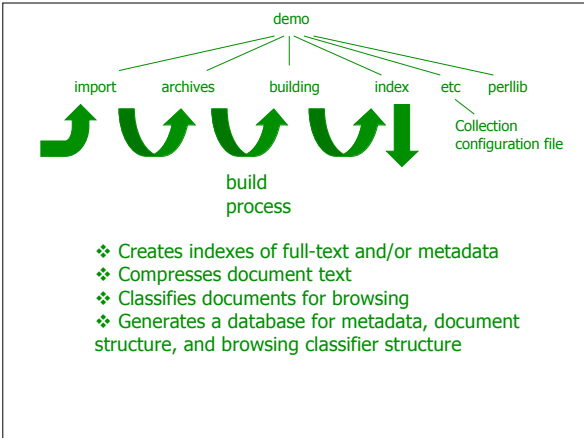

- ❖ Interface customization
- ❖ Customizing parts of a page
- ❖ Greenstone in your organization
- ❖ Installing the web library (demo)
- ❖ Administration pages
- ❖ User management
- ❖ Restricting access to documents
- ❖ Building a collection
- ❖ The dreaded black screen
- ❖ More on building
- ❖ Multilingual support
- ❖ Language interfaces

The building process

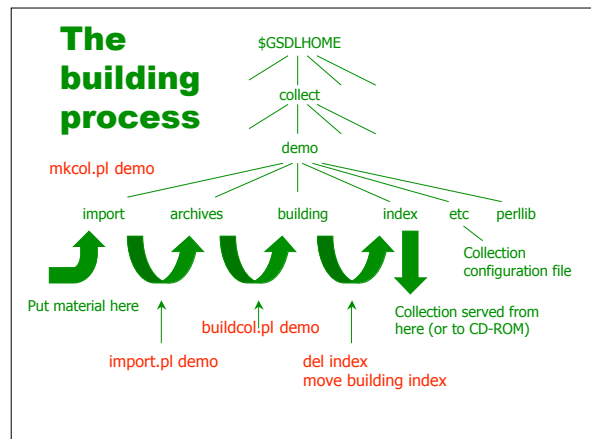

- ❖ Navigates *import* directory structure
- ❖ Assigns OIDs to documents
- ❖ Recognizes subsection structure
  - chapters, sections, subsections, pages, ...*
  - used for (a) reading books, (b) search indexes*
- ❖ Inserts metadata
  - Dublin Core plus extensions*
- ❖ Converts to Greenstone Archive format
  - uses plugins*
- ❖ Regularizes file structure

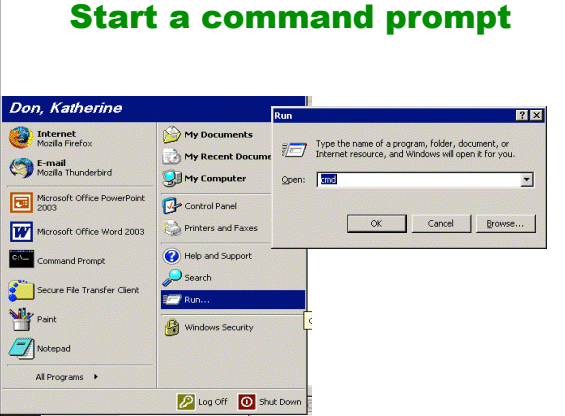

## Agenda

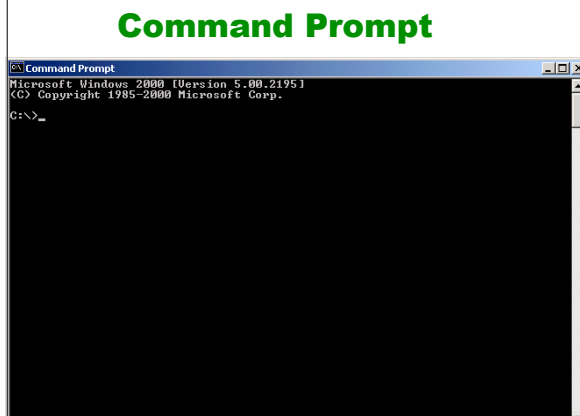

- ❖ Interface customization

- ➔ ❖ Language interfaces

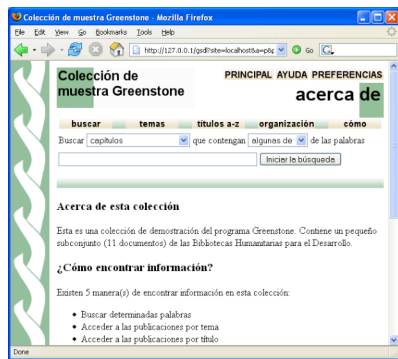

## Language Interfaces

❖ English:

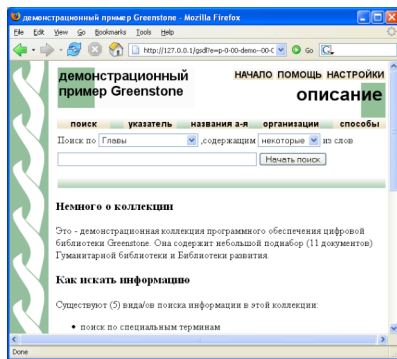

## Language Interfaces

❖ Spanish:

## Language Interfaces

❖ Russian:

## Language Interfaces

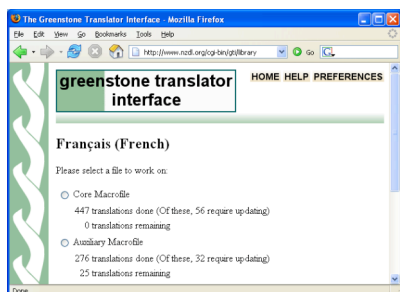

- ❖ Text fragments must be translated
- ❖ Button images must be generated
- ❖ Maintenance nightmare!
  - About 750 text fragments in the user interface
  - No one person knows all languages
  - Little/no overlap between developers and translators
  - Developers and translators geographically dispersed
  - Translations must keep pace with software developments
  - We need an automated system to help...

## Language Interfaces

- ❖ Greenstone Translator Interface (GTI)
  - Web-based system
  - Keeps track of which text fragments have changed, or are new
  - Translators are presented with pages containing the text fragments to update or translate
  - When submitted, these are saved to a separate installation of Greenstone
  - Mistakes in existing translations can be corrected
  - Translators can download the translated files
  - Translators must log in to add/edit translations
