## Agenda

- ❖ Multimedia and UnknownPlug
- ❖ Scanned images

## Multimedia and UnknownPlug

- ❖ Greenstone has plugins for these multimedia file types:
  - Images (.bmp, .gif, .jpg, .png, .tif, ...): ImagePlug
  - Audio (.mp3, .ogg): MP3Plug, OggVorbisPlug
  - Video (.rm): RealMediaPlug
- ❖ What about files that Greenstone doesn't have a plugin for?
 

No plugin expected to process file  
None of Greenstone's plugins are expected to process the file "pizza.mpg". Check that the file has the correct extension. If it is correct then you may have to use UnknownPlug to process this file.

Do not show this warning again

  - Use UnknownPlug, a plugin that will process *any* type of file

## Multimedia and UnknownPlug

- ❖ UnknownPlug knows nothing about any type of file, so it can only extract *very* basic metadata: file name and file size
  - Metadata must be manually assigned
- ❖ UnknownPlug is also unable to extract any text, so the files cannot be searched
  - Files are accessed by browsing or searching on assigned metadata

## Multimedia and UnknownPlug

- ❖ In the GLI, add UnknownPlug to the collection
  - Use the "process\_extension" option to tell UnknownPlug which type of files to process

Please configure the arguments for UnknownPlug.

## Multimedia and UnknownPlug

- ❖ When the collection is built, the file will now be included in the collection:

HOME HELP PREFERENCES

Test Collection    titles a-z

search    titles a-z    filenames

 pizza  
 pizza.mpg

## Multimedia and UnknownPlug

- ❖ Since UnknownPlug cannot extract any text, the Greenstone version of the document is very boring!

- ❖ Let's remove the link to this version
- Edit the VList format statement, and replace  
`[link][icon][link]`  
 with  
`{If}{[ex.Plugin] ne "UnknownPlug",[link][icon][link]}`

## Agenda

- ❖ Multimedia and UnknownPlug
- ➔ ❖ Scanned images

## Scanned images

- ❖ Need to be converted to an electronic form – scanning produces a set of images
- ❖ To add each page as an individual image, process using ImagePlug
- ❖ To group them into a single document, process using PagedImgPlug
  - Requires an 'item' file which lists all the pages and gives additional metadata

## Scanned images

- ❖ Can add metadata to the images to enable searching
- ❖ If full text searching is desired, use OCR (Optical Character Recognition) to generate an electronic version of the text
- ❖ Alternatively, if the documents are small and few, manually type the text into a file
- ❖ Text files can be included with the images in the item file
